Bowl feeder

Characteristics

The Grimm bowl feeders not only enable the sorting of "difficult" parts, but also impress with a good price-performance ratio compared to other feeders.

We offer sorting bowls with a diameter of 70 mm to 1200 mm

in three different designs: cylindrical-shaped, step-shaped and conical-shaped in steel, stainless steel or plastic (polyamide).

The plastic sorting bowls are milled and 3D-printed and can therefore be reproduced exactly. This offers a major advantage for identical bowl feeders.

Even harsh environmental influences such as oil or dirt are no problem for Grimm bowl feeders. Clean room or pharmaceutical designs can also be realised.

Structure bowl feeder

The structure of a bowl feeder is always characterised by two major components:

the drive, which generates vibrations in the sorting bowl by means of mechanical oscillations, thereby putting the parts in motion.

Sorting bowls (extra data sheet)

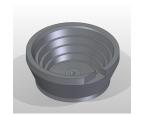

cylindrical-shaped: Ø 200 - 800 mm

step-shaped: Ø 290 - 900 mm

conical-shaped: Ø 300 - 900 mm

step-shaped (milled): Ø 150 - 600 mm

conical-shaped (milled): Ø 200 - 600 mm

Accessories

Designation	Description	Article no.
Control unit FAR-S-1V Control unit FAR-S-1	Phase-controllable, adjustable soft start and sensor inputs for accumulation shutdown and hopper release, without connecting plug and cable	21012029 21008727
Control unit FUR-S-10M, 3A (up to drive type RF30)	For devices up to 3A, frequency-independent control unit, sensor inputs for accumulation shutdown and hopper release, without connecting plug and cable	21010920
Control unit FUR-S-10XL, 6A (from drive type RF40)	For devices up to 6A, frequency-independent control unit, sensor inputs for accumulation shutdown and hopper release, without connecting plug and cable	21010921
Control unit FARR-S-1	Combination device for the control of bowl and linear feeder	21008722
Control unit FUR-S-SW-12XL	For devices up to 6A, frequency-independent control unit with vibration width sensor control including vibration width sensor and sensor inputs for accumulation shutdown and hopper release, without connecting plug and cable	21010922
Control unit FUR-S-SW-1	Frequency inverter specially designed for vibratory feeders, with level control (accumulation shutdown) and optional vibration width sensor	21008730
Pendulum switch PS1	Automatic filling level control of bulk material in the sorting device	21005856
Floor stand SBF	3 radially arranged positioning feet (Ø 500 mm), fixed adapted height	10000182
Floor stand SBV	With fine-setting screw for height and variable adjustment range	60000251
Mounting brackets	For simplified mounting of vibratory feeder drives on a base plate	_
